

New L^AT_EX Style for FAO Yearbook *

Boris Veytsman[†]

2013/12/18, v1.5

Abstract

This package provides class for typesetting FAO Yearbook. This is a refactoring of the `faoyeabook` package

1 Introduction

The package `faoyearbook` [1] was written in 2011 for FAO Statistical Yearbook.

The package `faosyb` is a refactoring of this package. We use the lessons learned and incorporate new design requirements. We use some (actually plenty) code from the previous version, but since we do not have to be compatibility, we can correct some unfortunate decisions.

2 User Guide

The installation of the class follows the usual practice [2] for L^AT_EX packages:

1. Run `latex` on `faosyb.ins`. This will produce the L^AT_EX class `faosyb.cls`.
2. Put the file `faosyb.cls` to the place where L^AT_EX can find it (see [2] or the documentation for your T_EX system).
3. Update the database of file names. Again, see [2] or the documentation for your T_EX system for the system-specific details.
4. The file `faosyb.pdf` provides the documentation for the package (this is the file you are probably reading now).

As an alternative to items 2 and 3 you can just put the file `faosyb.cls` in the working directory where your `.tex` file is.

*©2013, Food and Agriculture Organization of the United Nations

[†]borisv@lk.net, boris@varphi.com

2.1 Invocation

To use the class, put in the preamble of your document

```
\documentclass[<options>]{faosyb}
```

If the option **web** is chosen, the pages of the book have the dimensions corresponding to A4 paper. However, if the option **print** is chosen, then the pages are printed on a wider area, and crop marks are added for the trimming. Either **web** or **print** option must be chosen: there is no default.

If the option **issuu** is chosen, the internal links are transformed to external in the form suitable for <http://www.issuu.com>. Note that this option probably does not make much sense unless **web** option is also chosen. However, it is still possible to select both **print** and **issuu** option if someone needs it for an obscure purpose.

The option **Draft** (note the capitalization!) leads to the the large word ‘DRAFT’ printed across the pages. The standard L^AT_EX option **draft** leads to the same result, but it also makes other changes, most notably, in the behavior of the `\includegraphics` command and warnings.

`\ifprint` It is possible to query the current mode using the macro `\ifprint`, for example

```
\ifprint
  Stuff for print version
\else
  Stuff for web version
\fi
```

Any branch of this conditional may be empty, so web-only stuff can be coded as

```
\ifprint\else Web-only stuff\fi
```

`\includegraphics` There is a special facility for `\includegraphics` command to choose a file depending on the current mode of the package. Namely, if there is a file `image_print.pdf` visible by L^AT_EX, then the commands `\includegraphics{image}` or `\includegraphics{image.pdf}` selects the file `image_print.pdf`. In the case this file is not found, the file `image.pdf` is selected instead. Similarly in the web mode the file `image_web.pdf` will be selected first, and only if it does not exist, `image.pdf` is selected. This rule works also for commands `\includeLargeGraphics` and `\includeExtraLargeGraphics` described below.

Note that at this time there is no similar facility for the `\input` command.

2.2 Setting Parameters

`\faoset` Some parameters in the class can be set with the command `\faoset{<key=value>}`, for example

```
\faoset{bgcolor=blue}
```

Most of the parameters are explained below.

One of the important parameters is **year**. While the package at this time does not provide facilities for the title pages, it needs to know the year for the proper typesetting of footers. The command

```
\faoset{year=2013}
```

is used to provide this information.

2.3 Fonts

`\narrowfamily` The class uses PT Sans fonts [3] for body text and Arev fonts [4] for math. It defines two additional families: Narrow and Caption, corresponding to the PT Sans Narrow and PT Sans Caption font. They can be selected by the declarations `\captionfamily` and `\textcaption` or by the commands `\textnarrow{<text>}` and `\textcaption{<text>}` following the usual L^AT_EX conventions. Note that since PT Sans does not provide math alphabet, this choice does not change the mathematical text.

PT Sans Narrow may be useful for typesetting tables, for example,

```
{\scriptsize\narrowfamily
\rowcolors{4}{@bgcolor!30}{@bgcolor!20}
\input{./Tables/P1.DEM_1.tex}}
```

The choice of `\narrowfamily` is automatically done by the `tablepages` environment.

2.4 Colors and Icons for Parts

A Yearbook is separated into parts (more on this below). Each part has its own color and icon. They are set by the keys `bgcolor` and `icon` of the `\faoset` command, for example,

```
\faoset{icon=./Icons/agriculture.png}
\faoset{icon=./Icons/population}
\faoset{bgcolor=blue}
\faoset{bgcolor=green!25!yellow}
```

The parameter for the `icon` key can be any file name (with or without extension), suitable for the `\includegraphics` command. The parameter for the `bgcolor` key can be specified in any form acceptable by `xcolor` package [5].

The key `tableheadcolor` sets the color for the headers of tables defined by H or P key (see Section 2.7). Normally it is the current `@bgcolor` color, but it can be set to any required value.

`\selecticon` Note that `\faoset` command does not change the icon or background color immediately. When issued *before* `\part` command, it sets up icon and color for

the next part. If needed, you can manually change this using `\selecticon` and `\selectcolor` commands. In most cases you should *not* use these commands.

`@bgcolor` After a `\part` command (or explicit `\selecticon` and `\selectcolor` command we can access the current values of the color in `@bgcolor`, `@tablecolor`
`@tableheadcolor` colors and `\currenticon` macro.
`\currenticon`

Foreword and other parts in the front matter of the book do not use icons. Instead they have geometric symbols. The key `symbol` can have the values `righttriangle`, `square`, `rightsemicircle` and sets the symbol for such part.

`\lettrine` Front matter uses dropped capitals (lettrines) in the beginning of the sections. The command `\lettrine{W}{ord}` can help in this case.

2.5 Sectioning

`\part` The main division of the text are `\parts`. The command `\part{<title>}` is used for
`\section` numbered parts, while the command `\part*{<title>}` is used for unnumbered parts.
`\subsection` The next division are `\sections` and `\subsections`. They are never numbered.
The style does not use `\chapters`.
`\EndPartIntro` The sections immediately following new parts are special: they are typeset in one column and cannot have floats. The command `\EndPartIntro` switches to the “normal” sections.

2.6 Headers and Footers

`\evenfootmark` Normally headers and footers are defined by the text. However, there is a
`\oddfootmark` possibility to change some of them. Commands `\evenfootmark{<text>}` and `\oddfootmark` set the right and left footers for even and odd pages correspondingly (the remaining footers are used by the page numbers). By default they are defined as

```
\evenfootmark{\textbf{FA0} Statistical Yearbook \textbf{\fao@year}}
\oddfootmark{\rightmark}
```

The last command sets the footer to be the current section name (or part name before the first section), but the user can change this.

2.7 Floats

One of the most important changes from the previous version of the class [1] is the treatment of floats.

In standard \LaTeX floats “float”: they can be placed by the algorithm anywhere. The previous version made them “sticky”: the author explicitly tells \TeX where floats should be placed. However, to do so the class required the author to make explicitly page breaks, which was not very convenient.

This version has a completely rewritten interface and algorithm for placing floats:

Figure 1: A Spread

1. Like in standard \LaTeX , authors do not normally provide page breaks— \TeX tries to make this decision for them.
2. Like in the previous version, floats are put exactly where the authors want them—no default placing and second-guessing.

Here is how it is done.

The main unit of the book is *spread*: a verso page and the corresponding recto page. Each page is divided into four quarters, upper left, upper right, lower left and lower right. We will denote them `ul`, `ur`, `ll`, `lr` for the verso page and `UL`, `UR`, `LL`, `LR` for the recto page (Figure 1). We allow four kinds of floats:

Single floats occupy exactly one quarter. They are denoted as `S`.

Tall floats occupy two quarters stacked vertically (for example, `ul` and `ll`). They are denoted as `T`.

Wide floats occupy two quarters adjacent horizontally (for example, `LL` and `LR`). They are denoted as `W`.

Big floats occupy all four quarters on a page. They are denoted as `B`.

The parameters $\{\langle type \rangle\}$ and $\{\langle location \rangle\}$ are mandatory for floats, for example

```

\begin{map}{T}{ur}
...
\end{map}
\begin{chart}{S}{UL}
...
\end{chart}

```

For multiquarter floats the location is the location of the upper left corner, so Big float can use only `ul` or `UL` location.

Of course, not all combinations are valid: you cannot specify float as `{T}{ll}` or `{W}{UR}`, for example. If you use such combinations, the results may be unpredictable. Also it is not predictable what happens if you try to put overlapping floats (e.g. `{S}{UR}` and `{W}{UL}`).

There are two additional rules:

1. A verso page may have text and floats (still it is recommended that if it has text, then it should not have floats occupying the upper left corner).
2. A recto page may have *either* text or floats: if there are floats for this page, all text is moved to the following verso page.

<code>chart</code> <code>map</code> <code>table</code>	<p>There are three types of floats defined by the class:</p> <p>chart plots and other charts,</p> <p>map mapped data.</p> <p>table mini tables.</p>
<code>caption</code>	<p>Each of these kinds of material is typeset using the corresponding environment: chart, table or map. Note that the caption for each of these environments <i>must</i> precede the graphical material, for example:</p>

```

\begin{chart}{B}{UL}
\caption{Hunger Data}
\label{chart:hunger}
\includegraphics{hunger.pdf}
\end{chart}

```

Note that our class redefines `table` environemnt!. For tables on separate pages use `longtable`.

<code>\chartwidth</code> <code>\chartheight</code>	<p>Inside a chart, map or table it is useful to know the size allocated for the graphics or table, for example, to be able to scale the graphics. Two lengths, <code>\chartwidth</code> and <code>\chartheight</code> provide this information, so the user can say, for example,</p>
---	--

```

\includegraphics[width=\chartwidth, height=\chartheight]{theChart}

```

`\source` Inside a `chart`, `map` or `table` the macro `\source{<source>}` gives the source of the information, for example,

`\Source{FA0, Statistical Division [FAOSTAT]}`

`\listoftables` The standard L^AT_EX has the command `\listoftables` to produce the list of
`\listofcharts` tables in the document. Our class retains this command and produces two addi-
`\listofmaps` tional commands `\listofcharts` and `\listofmaps` with the obvious meaning.

2.8 Page Breaks

`\clearpage` Standard L^AT_EX has commands for immediate page break (e.g. `\clearpage`)
`\cleardoublepage` and for switching to the next recto page, possibly ejecting the next verso page
`\clearspread` (`\cleardoublepage`). The class provides another command `\clearspread`. It
switches to the next *verso* page, possibly ejecting the next recto page (and putting
there floats intended for this page, if any).

2.9 Tables

`tablepages` The tables at the end of a part should be typeset inside `tablepages` environment. The environment switches to the one column setup, decreases the margins and changes the font to `\narrowfamily`.

To typeset numerical items one should use `d` column identifier with the format `d{<a.b>}`, where *a* is the number of decimal in the integer part of the number, and *b* is the number of decimal digitst in the fractional part. For example, a number 12.345 corresponds to `d{2.3}`. The column headers are usually *not* numerical, so one need to use `\multicolumn` entries to typeset them. The class defines several such entries:

H produces a centered entry.

P produces an entry of a given length, for example, `P{1.5cm}`

C produces an entry of the length corresponding to the given number of numerical columns. For example, `C{2}` corresponds to a header of two numerical columns. Each column is assumed to be of the size enough to store -99.999 .

`\hhline` For the rules that do not span the table width `\hhline{<specificaition>}` command from the `hhline` package should be used. The `{<specification>}` argument of this command has many variants, but for our purposes we need only one variant: the command `-` produces a horizontal line spanning one column. The color of this line is determined by the command `\arrayrulecolor{<color>}`, issued in the last `>{<argument>}` command before the `-` specification. Therefore the command `>\arrayrulecolor{@tableheadcolor}-` produces a line of the color `@tableheadcolor`, which is seen as the absence of line. The command `>\arrayrulecolor{black}---` produces a black line spanning three columns.

Thus if we have a four-column table and want a rule spanning columns 2-3, the following command should be issued:

```
\hhline{>\arrayrulecolor{@tableheadcolor}}-% Column 1, no rule
>\arrayrulecolor{black}--% Columns 2 and 3, black rule
>\arrayrulecolor{@tableheadcolor}}-% Column 4, no rule
```

The usual `*` specification may be used for repeating patterns, for example, `*{5}{-}` is equivalent to `-----`.

The vertical bar `|` specification in the `\hhline` argument means an interruption of the line. The interruption is by default a black interval, to make it the same color as the header background, use `>\arrayrulecolor{@tableheadcolor}}|`.

The design of the tables in the current edition requires several important changes to the usual tables:

1. There should be no `\toprule` at the beginning of a table.
2. The first row header of a table must be empty and white; this is done by the command `\cellcolor{white}` in this cell.
3. `\hhline` separating rows in the header must not go through this first white cell; this is done by the `~` specification.

2.10 Publication Descriptions

`\KeyResources` Publication descriptions normally are collected in a special section inside part introduction. This section is introduced by the command `\KeyResources`. There are two options that must be set by `\faoset` to use by this command: `resourcesicon` and `resourcesname`. The first is the filename of the icon used for section heading, the second is the name of the section, for example

```
\faoset{resourcesicon=icons/resources.png,
resourcesname={Key Resources}}
```

`publication` FAO yearbook describes some FAO publications. These publications should be put inside the environment `publication`. The environment has one mandatory argument, which is the title of the publication, and one optional argument, which sets the file name of the publication cover. Note that the option argument, if present, must precede the mandatory one. If this argument is absent, no cover is included. Inside the environment the macros `\pDescription{<description>}`, `\pEdition{<year>}{<edition>}`, `\pWeb{<URL>}` and `\pCycle{<date>}` are used to typeset the corresponding items related to the publication. For example,

```
\pDescription
\pEdition
\pCycle
pWeb
\begin{publication}[./Plots/StateOfFoodAndAgriculture.png]{The State
of Food and Agriculture}
\pDescription{The State of Food and Agriculture, FAO's major
annual flagship publication, aims at bringing to a wider
audience balanced science-based assessments of important issues}
```

```

in the field of food and agriculture. Each edition of the
report contains a comprehensive, yet easily accessible, overview
of a selected topic of major relevance for rural and
agricultural development and for global food security. This is
supplemented by a synthetic overview of the current global
agricultural situation.}
\pEdition{2010}{Livestock in the balance}
\pEdition{2011}{Women in Agriculture Closing the gender gap for
development}
\pCycle{May each year}
\pWeb{http://www.fao.org/docrep/013/i2050e/i2050e00.htm}
\end{publication}

```

Note that, as in the example, some fields may be repeated.

`publicationparskip` Two spacing parameters can be used for typesetting of publications: `publicationskip` is the amount of additional space between the publications, while `publicationparskip` is the space between the paragraphs inside the publication environment. The default values correspond to the command

```

\faoset{publicationskip=6pt plus 2pt minus 2pt,
publicationparskip=6pt plus 6pt minus 4pt}

```

2.11 Metadata

`\metadatasection` The sources of the data are collected in special sections called “Metadata section”. Each section is introduced by the command `\metadatasection{<title>}`, for example,

```
\metadatasection{Indicators}
```

`metadata` The sources themselves are collected in the `metadata` environments. Each environment has one obligatory argument—the name of the source. It may include the following commands:

```

\key \key{<key>} sets the corresponding key which is used for labeling the metadata
\source \source{<source>} sets the source of the data.
\owner \owner{<owner>} sets the owner of the data.

```

Note that there is no “description” command because any text which is not an argument of the commands above is considered to belong to the description of the data.

Example of the usage of these commands:

```

\metadatasection{Indicators}
\begin{metadata}{Agricultural population}
\key{agripop}%

```

```

Agricultural population is defined as all persons depending for
their livelihood on agriculture, hunting, fishing and forestry.
It comprises all persons economically active in agriculture as
well as their non-working dependents. It is not necessary that
this referred population exclusively come from rural population.
\source{FILL ME}
\owner{FILL ME}
\end{metadata}

```

Each indicator is preceded by a square, normally grey-colored. The command `\faoset` with the key `indicatorsquarecolor` can be used to set the color of the square, for example

```
\faoset{indicatorsquarecolor={black!10}}
```

`\refMetadata` The metadata is referenced by the command `\refMetadata{<key>}`, for example

```
\refMetadata{agripop}
```

This command will not be typeset, but makes creates a backreference to the corresponding chart from the indicator section.

Note that the package automatically provides backreferencing: all charts, maps and tables where the metadata is referenced, are mentioned in the corresponding metadata section.

2.12 Further Reading

`freading` The special environment `freading` is used for the “further reading” sections of the book. It starts the text from the new page and changes some defaults.

2.13 Subscripts in Text

`\textsubscript` The standard L^AT_EX defines `\textsuperscript`. The class adds a similar `\textsubscript` command.

3 Implementation

3.1 Options

`\faoyearbook@size@warning` The font-changing options are not used in our setup, so we just produce a warning:

```
1 \long\def\faoyearbook@size@warning#1{%
2   \ClassWarning{faoyearbook}{Size-changing option #1 will not be
3     honored}}%
4 \DeclareOption{8pt}{\faoyearbook@size@warning{\CurrentOption}}%
5 \DeclareOption{9pt}{\faoyearbook@size@warning{\CurrentOption}}%
6 \DeclareOption{10pt}{\faoyearbook@size@warning{\CurrentOption}}%
7 \DeclareOption{11pt}{\faoyearbook@size@warning{\CurrentOption}}%
8 \DeclareOption{12pt}{\faoyearbook@size@warning{\CurrentOption}}%
```

`\ifprint` We have a flag which shows whether we are in Web or print mode

```
9 \newif\ifprint
10 \printfalse
11 \DeclareOption{web}{\printfalse
12   \PassOptionsToPackage{paper=a4paper}{geometry}}
13 \DeclareOption{print}{\printtrue
14   \PassOptionsToPackage{papersize={230mm,317mm},
15     layoutoffset=1cm,layoutvoffset=1cm}{geometry}}
```

`\ifDraft` If we are in ‘Draft’ or ‘draft mode’, we print a word ‘draft’ across the page:

```
16 \newif\ifDraft
17 \Draftfalse
18 \DeclareOption{Draft}{\Drafttrue}
19 \DeclareOption{draft}{\Drafttrue}
```

`\if@issuemode` Whether we need issuu-style links

```
20 \newif\if@issuemode
21 \@issuemodefalse
22 \DeclareOption{issuu}{\@issuumodetrue}
```

All other options are just sent to the main class:

```
23 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{report}}
24 \ProcessOptions\relax
```

3.2 Loading Class and Packages

We start with the base class and some packages

```
25 \LoadClass[10pt,twoside,twocolumn]{report}
26 \RequirePackage{graphicx,xkeyval}
27 \RequirePackage[table,cmyk]{xcolor}
28 \RequirePackage{tikz,dcolumn}
29 \RequirePackage{geometry}
30 \usetikzlibrary{calc}
31 \RequirePackage{fancyhdr}
32 \RequirePackage{lscape,longtable,siunitx,booktabs}
```

```

33 \RequirePackage{multicol,atbegshi,picture,hhline,afterpage}
34 \RequirePackage[T1]{fontenc}
35 \RequirePackage[utf8x]{inputenc}
36 \RequirePackage{pdfpages}
37 \RequirePackage[authoryear]{natbib}
38 \RequirePackage[breaklinks]{hyperref}
39 \RequirePackage{bookmark}
40 \RequirePackage{adjmulticol,lettrine}
41 \if@issuume
42 \RequirePackage{issuulinks}
43 \fi

```

Options for the hyperref package are set as follows:

```

44 \ifprint
45 \hypersetup{breaklinks,colorlinks=false,pdfborder=0 0 0,
46   pdfauthor={FAO},
47   pdfsubject={Statistical Yearbook of the Food And Agricultural Organization for the United Nations},
48   pdftitle={Statistical Yearbook of the Food And Agricultural Organization for the United Nations},
49   pdfkeywords={FAO, Food Security, Undernourishment, Sustainable agriculture},
50   pdfpagelayout=TwoColumnLeft,
51   pdfnewwindow=true
52 }
53 \else
54 \hypersetup{breaklinks,colorlinks=false,pdfborder=0 0 0,
55   pdfauthor={FAO},
56   pdfsubject={Statistical Yearbook of the Food And Agricultural Organization for the United Nations},
57   pdftitle={Statistical Yearbook of the Food And Agricultural Organization for the United Nations},
58   pdfkeywords={FAO, Food Security, Undernourishment, Sustainable agriculture},
59   pdfpagelayout=TwoColumnRight,
60   pdfnewwindow=true
61 }
62 \fi

```

3.3 Color

We need to tell the printer that we are using CMYK color model. The following is taken from the pdfx package (the package itself is not too easy to make work).

```

63 \def\@pctchar{\expandafter\@gobble\string\%}
64 \def\@bchar{\expandafter\@gobble\string\}
65 \immediate\pdfobj stream attr{/N 4} file{FOGRA39L.icc}
66 \edef\OBJ@CVR{\the\pdfobj}
67 \pdfcatalog{/OutputIntents [ <<
68   /Type/OutputIntent
69   /S/GTS_PDFX
70   /OutputCondition (FOGRA39)
71   /OutputConditionIdentifier (FOGRA39 \bchar{ISO Coated v2
72     300\pctchar\space \bchar{ECI\bchar}\bchar})
73   /DestOutputProfile \OBJ@CVR\space 0 R
74   /RegistryName(http://www.color.org)
75   >> ]}

```

`\LettrineFontHook` We want the drop caps to have @bgcolor
`76 \renewcommand\LettrineFontHook{\color{@bgcolor}}`

`\DefaultFindent` The distance between the dropped capital and the text
`77 \setlength\DefaultFindent{2pt}`

3.4 Key-Value Interface

`\faoset` We define the family `fao` for our keys:
`78 \def\faoset#1{\setkeys{fao}{#1}}`

One of the important keys is `year`
`79 \define@key{fao}{year}{\gdef\fao@year{#1}}`
`80 \faoset{year=20XX}`

3.5 Fonts

We use `arev` for mathematics:
`81 \RequirePackage{arevmath}`

For body text we use PT Sans:
`82 \def\PTSans@scale{0.95}`
`83 \def\PTSansNarrow@scale{0.95}`
`84 \def\PTSansCaption@scale{0.95}`
`85 \renewcommand{\sfdefault}{PTSans-TLF}`
`86 \renewcommand{\familydefault}{\sfdefault}`
`87 \renewcommand{\bfdefault}{b}`

`\narrowfamily` We declare a new family, `\narrowfamily`:
`88 \DeclareRobustCommand\narrowfamily{\fontfamily{PTSansNarrow-TLF}\selectfont}`

`\textnarrow` And the matching `\textnarrow` command:
`89 \DeclareTextFontCommand{\textnarrow}{\narrowfamily}`

`\captionfamily` Same with `\captionfamily`:
`90 \DeclareRobustCommand\captionfamily{\fontfamily{PTSansCaption-TLF}\selectfont}`

`\textcaption` And the matching `\textcaption` command:
`91 \DeclareTextFontCommand{\textcaption}{\captionfamily}`

`\normalsize` The basic size is 9.6pt:
`92 \renewcommand\normalsize{%`
`93 \setfontsize\normalsize{9.6pt}{\@xipt}%`
`94 \abovedisplayskip 10\p@ \@plus2\p@ \@minus5\p@`
`95 \abovedisplayshortskip \z@ \@plus3\p@`
`96 \belowdisplayshortskip 6\p@ \@plus3\p@ \@minus3\p@`
`97 \belowdisplayskip \abovedisplayskip`
`98 \let\@listi\@listI}`
`99 \normalsize`

`\small` This is the small size:

```
100 \renewcommand\small{%
101   \@setfontsize\small\@ixpt{10}%
102   \abovedisplayskip 8.5\p@ \@plus3\p@ \@minus4\p@
103   \abovedisplayshortskip \z@ \@plus2\p@
104   \belowdisplayshortskip 4\p@ \@plus2\p@ \@minus2\p@
105   \def\@listif\leftmargin\leftmargini
106           \topsep 4\p@ \@plus2\p@ \@minus2\p@
107           \parsep 2\p@ \@plus\p@ \@minus\p@
108           \itemsep \parsep}%
109   \belowdisplayskip \abovedisplayskip}
```

We use `rm` style of URL:

```
110 \urlstyle{sf}
```

3.6 Margins and Paragraphing

`\parindent` We use not indented paragraphs with paragraph borders given by skips

```
\parskip 111 \setlength\parindent\z@
112 \setlength\parskip{6\p@ plus 6\p@ minus 4\p@}
```

We use `a4paper`.

```
113 \geometry{layout=a4paper,
114   left=5cm,right=3.5cm,bottom=2cm,top=76mm,
115   footskip=8mm, head=30mm, headsep=3mm,
116   columnsep=6mm, twoside}%
117 \savegeometry{frontmatter}
118 \geometry{layout=a4paper,
119   left=2cm,right=2cm,bottom=2cm,top=2.3cm,
120   footskip=8mm, head=30mm, headsep=3mm,
121   columnsep=6mm, twoside}%
122 \savegeometry{standard}
```

3.7 Cropmarks

There are several packages that provide crop marks. Unfortunately they do not work for us because they put crop marks at the background. Since we have colored pages, we want crop marks to be on the foreground.

In this section we re-implement cropmarks of the `geometry` package, putting the marks on the foreground.

We postpone the code to the beginning of the document to get the proper value of the switch

```
123 \AtBeginDocument{\ifprint
124   \AtBeginShipout{%
125     \AtBeginShipoutUpperLeftForeground{%
126       \color{black}%
127       \@tempdima=\Gm@layouthoffset
128       \@tempdimb=\Gm@layoutvoffset
```

```

129 \put(\@tempdima,-\@tempdimb+6\p@){\line(0,1){50}}%
130 \put(\@tempdima-6\p@,-\@tempdimb){\line(-1,0){50}}%
131 \advance\@tempdima by \Gm@layoutwidth
132 \put(\@tempdima,-\@tempdimb+6\p@){\line(0,1){50}}%
133 \put(\@tempdima+6\p@,-\@tempdimb){\line(1,0){50}}%
134 \advance\@tempdimb by \Gm@layoutheight

139 \put(\@tempdima,-\@tempdimb-6\p@){\line(0,-1){50}}%
140 }}\fi}

```

In draft mode we put the word ‘DRAFT’ across the page:

```

141 \AtBeginDocument{\ifDraft
142   \AtBeginShipout{%
143     \AtBeginShipoutUpperLeft{%
144       \color{black!25}%
145       \@tempdima=\Gm@layouthoffset
146       \@tempdimb=\Gm@layoutvoffset
147       \advance\@tempdima by 0.2\Gm@layoutwidth
148       \advance\@tempdimb by 0.7\Gm@layoutheight
149       \put(\@tempdima,-\@tempdimb){%
150         \rotatebox{45}{%
151           \fontsize{6cm}{6cm}\selectfont
152           DRAFT}}}}\fi}

```

3.8 Setting Colors and Icons

`\fao@color@string` This is the command that remembers the present color for TOC

```
153 \def\fao@color@string{0,0,0}
```

`@bgcolor@next` We store the next background color in `@bgcolor@next`. We store the next heading background in `@tableheadcolor@next`.

`\setbgcolor` The command `\setbgcolor` selects the next background color:

```

154 \def\setbgcolor#1{\colorlet{@bgcolor@next}[cmyk]{#1}%
155   \@for\curr@ext:=\@toc@ext@list\do{%
156     \addtocontents{\curr@ext}{\string\colorlet{@bgcolor}[cmyk]{#1}}}%
157   \addtocontents{toc}{\string\colorlet{@bgcolor}[cmyk]{#1}}%
158   \gdef\fao@color@string{#1}}
159 \colorlet{@bgcolor@next}[cmyk]{white}

```

The key-value interface for the same command:

```
160 \define@key{fao}{bgcolor}{\setbgcolor{#1}}
```

And for separate setting of `@tableheadcolor`

```
161 \define@key{fao}{tableheadcolor}{\colorlet{@tableheadcolor}[cmyk]{#1}}
```

`@bgcolor` The current color is in the macro `@bgcolor`.

`@tableheadcolor` This command makes the actual color change:

```

\selectcolor 162 \def\selectcolor{\colorlet{@bgcolor}{@bgcolor@next}}%
              163 \colorlet{tableheadcolor}{@bgcolor}}
              164 \selectcolor

@tablebg The color for table pages
          165 \define@key{fao}{tablebg}{\colorlet{tablebg}[cmyk]{#1}}

\seticon Setting the next icon for the part
          166 \def\seticon#1{\gdef\next@icon{#1}}
          167 \define@key{fao}{icon}{\seticon{#1}}

\selecticon The actual icon change
\currenticon 168 \def\selecticon{\gdef\currenticon{\next@icon}}
              169 \def\next@icon{}

\newicon Define an icon #2 for the part #1
          170 \def\newicon#1#2{\expandafter\gdef\csname @icon@#1\endcsname{#2}}

\colored@icon The icon for us is just a mask. This will create a colored icon using background
              @bgcolor
          171 \newcommand\colored@icon[2][]{\bgroup\fbboxsep=-1pt%
          172 \fcolorbox{white}{@bgcolor}{\includegraphics[#1]{#2}}\egroup}

\colored@icon@fg The icon for us is just a mask. This will create a colored icon using background
              @bgcolor!#3
          173 \newcommand\colored@icon@fg[3][]{\bgroup\fbboxsep=-1p@%
          174 \fcolorbox{white}{@bgcolor!#3}{\includegraphics[#1]{#2}}\egroup}

```

\faopartbloptop Some pages have “part blobs”: colored blobs on the specific positions of the page.
\faopartblobbottom These macros set the top and the bottom of the blob corresponding to the part
set in the second parameter:

```

```

277 \def\fao@partblobtop#1#2{\expandafter\gdef\csname fao@blobstart#1\endcsname{#2}}
278 \def\fao@partblobbottom#1#2{\expandafter\gdef\csname fao@blobend#1\endcsname{#2}}

```

3.10 Nonfloats

In Faoyearbook we used float package. Since we changed too much in the internals, here we just rewrite the code from scratch.

<code>\@toc@ext@list</code>	Added macro Comma-separated list of extensions for toc-like files: 279 <code>\gdef\@toc@ext@list{toc}</code>
<code>\nf@vert@sep</code>	Vertical separation between the floats 280 <code>\newlength\nf@vert@sep</code> 281 <code>\setlength\nf@vert@sep{10mm}</code>
<code>\nf@width</code>	The width of the nonfloat 282 <code>\newlength\nf@width</code>
<code>\nf@height</code>	The height of the nonfloat 283 <code>\newlength\nf@height</code>
<code>\nf@captionheight</code>	The height reserved for the caption 284 <code>\newlength\nf@captionheight</code> 285 <code>\setlength\nf@captionheight{11mm}</code>
<code>\nf@sourceheight</code>	The height reserved for the source lines 286 <code>\newlength\nf@sourceheight</code> 287 <code>\setlength\nf@sourceheight{2\baselineskip}</code>
<code>\nf@margin</code>	Margin for floats 288 <code>\newlength\nf@margin</code> 289 <code>\setlength\nf@margin{12\p@}</code>
<code>\nf@trianglebase</code>	The design requires a triangle under the caption. Here it is 290 <code>\newlength\nf@trianglebase</code> 291 <code>\setlength\nf@trianglebase{12\p@}</code>
<code>\chartwidth</code>	The resulting width of a chart 292 <code>\newlength\chartwidth</code>
<code>\chartheight</code>	The resulting width of a chart 293 <code>\newlength\chartheight</code>
<code>\nf@topskip</code>	Top separation for a nonfloat <code>@topskip</code>
<code>\nf@bottomskip</code>	Bottom separation for a nonfloat <code>@bottomskip</code>

`\nonfloat@type` The counter to keep the next type to assign
294 `\newcount\nonfloat@type`
295 `\nonfloat@type=4\relax`

`\nf@contentsbox` The box to keep the contents of the float
296 `\newbox\nf@contentsbox`

`\nf@mainbox` The box for the float
297 `\newbox\nf@mainbox`

`\newnon@float` The macro `\newnon@float` has the following arguments: TYPE, EXT, NAME for example
`\newnon@float{map}{lom}{Map}`

It defines a nonfloat with these parameters.

298 `\def\newnon@float#1#2#3{%`

First, we need to define `\ftype@TYPE`: the type of the float. Note that tables are taken, so we need to make a special care of nonfloats that correspond to floats.

299 `\expandafter\ifx\csname ftype@#1\endcsname\relax`
300 `\expandafter\edef\csname ftype@#1\endcsname{\the\nonfloat@type}%`
301 `\multiply\nonfloat@type by 2\relax`
302 `\fi`

Now we define the extension for the floats

303 `\expandafter\def\csname ext@#1\endcsname{#2}%`
304 `\xdef\toc@ext@list{\toc@ext@list,#2}%`

The macro `\fnum@TYPE` formats the line like “Figure 1”. We need to check whether the counter is defined

305 `\expandafter\ifx\csname the#1\endcsname\relax`
306 `\newcounter{#1}\fi`
307 `\expandafter\def\csname fnum@#1\endcsname{#3~\csname`
308 `the#1\endcsname}%`

Now we want to define the environment TYPE. Since it might be already defined, we first delete this definition, otherwise `\newenvironment` might throw an error

309 `\expandafter\let\csname #1\endcsname\relax`
310 `\expandafter\let\csname end#1\endcsname\relax`

And the actual definition

311 `\newenvironment{#1}{\non@float{#1}}{\endnon@float}}`

`\@getfirstletter` An aux macro to get a first letter of a word. Used in constructs

`\edef\U{\@getfirstletter{AAAAA\@endword}}`

312 `\def\@getfirstletter#1{\@getfirstletter#1}`
313 `\def\@getfirstletter#1{#1\@gobbleword}`
314 `\def\@gobbleword#1\@endword{}`

`\non@float` Now we are ready to define the `\non@float` macro. It has three parameters: TYPE, SIZE and PLACEMENT. `\nf@source` is the source of the float.

```

315 \def\non@float#1#2#3{
316   \def\@capttype{#1}%
317   \def\nf@size{#2}%
318   \def\nf@placement{#3}%

```

The macro `\nf@vert@pos` is either u or l

```

319   \lowercase{\xdef\nf@vert@pos{\@getfirstletter#3\@endword}}
320   \global\let\nf@source\@empty

```

Define the source command inside float

```

321   \def\source##1{\gdef\nf@source{##1}}

```

Define the caption producing command:

```

322 \long\def\@makecaption##1##2{\long\gdef\nf@caption{%
323   {\bfseries\large\color{white}
324     \MakeUppercase{##1}: ##2}}}%
325 \gdef\nf@caption{}%

```

We calculate the size of the float and skips

```

326   \nf@width=\columnwidth
327   \nf@height=\dimexpr(\textheight/2-\nf@vert@sep)%
328   \if\nf@vert@pos u\relax
329     \nf@topskip=\z@
330     \nf@bottomskip=\nf@vert@sep
331   \else
332     \nf@topskip=\nf@vert@sep%
333     \nf@bottomskip=\z@
334   \fi
335   \def\tempW{W}%
336   \def\tempT{T}%
337   \def\tempB{B}%
338   \ifx\nf@size\tempW
339     \nf@width=\textwidth
340   \fi
341   \ifx\nf@size\tempT
342     \nf@height=\textheight
343     \nf@topskip=\z@
344     \nf@bottomskip=\z@
345   \fi
346   \ifx\nf@size\tempB
347     \nf@width=\textwidth
348     \nf@height=\textheight
349     \nf@topskip=\z@
350     \nf@bottomskip=\z@
351   \fi
352   \charheight=
353     \dimexpr(\nf@height-\nf@captionheight-\nf@sourceheight
354       -2\nf@margin-\nf@trianglebase)%
355   \ifx\nf@size\tempB

```

```

356   \advance\charheight by -2\baselineskip
357 \fi
358 \ifx\nf@size\tempT
359   \advance\charheight by -2\baselineskip
360 \fi
361 \chartwidth=\dimexpr(\nf@width-2\nf@margin-0.5\nf@trianglebase)%
362 \nf@height=\dimexpr(\nf@height+\nf@topskip+\nf@bottomskip)%

```

Now we construct the main box.

```

363 \global\setbox\nf@contentsbox
364   \color@vbox
365   \normalcolor
366   \vbox to \charheight
367   \bgroup
368   \hsize\chartwidth
369   \@parboxrestore
370   \@floatboxreset
371 }

```

\endnon@float The actual typesetting

```

372 \def\endnon@float{\@endfloatbox\par
373   \hsize=\nf@width

`\map` A standard nonfloat:

```
424 \newnon@float{map}{lom}{Map}
```

`\listofmapsname` The name for the list of maps

```
425 \def\listofmapsname{List of Maps}
```

`\table` Another one

```
426 \newnon@float{table}{lot}{Table}
```

`\chart` And another one

```
427 \newnon@float{chart}{loc}{Chart}
```

`\listofchartsname` The name for the list of charts

```
428 \def\listofchartsname{List of charts}
```

3.11 Output Routine

This is hairy because output routines are hairy...

We need several insert boxes. Naming convention: the letter for the box size and two letter code for the location. We use `\newbox` instead of `\newinsert` since we do not use associated `\count`, `\dimen` and `\skip` registers.

```

429 \newbox\nfbox@S@ul
430 \newbox\nfbox@S@ur
431 \newbox\nfbox@S@ll
432 \newbox\nfbox@S@lr

```

```

433 \newbox\nfbox@S@UL
434 \newbox\nfbox@S@UR
435 \newbox\nfbox@S@LL
436 \newbox\nfbox@S@LR
437 \newbox\nfbox@T@ul
438 \newbox\nfbox@T@ur

485 %
486 % There are several possibilities when we start the output routine for
487 % a single column in a two-column layout.
488 % \begin{enumerate}
489 % \item Wide or big non-floats completely cover the page. In this
490 % case we do not need to create columns, and directly go to the
491 % output.
492 % \item The columnd is occupied by tall or single nonfloats. We make
493 % a column of nonfloats and send it further.
494 % \item There is room for text on the page, but its height
495 % (\cs{@colroom}) is different from the one known to the page builder
496 % (\cs{vsize}). In this case we change \cs{vsize} and return.
497 % \item The room for text is exactly \cs{vsize}. In this case we form
498 % a column and return.
499 % \end{enumerate}
500 % \begin{macrocode}
501 \global\@colht=\textheight

543   \global\ysize\textheight
544   \global\@colht\textheight
545   \@outputpage
546   \@firstcolumntrue
547 }

```

`\nf@makecol` This macro tries to make one column of text. If successful, it puts first column into temporary storage, and outputs the page when or if the second column is ready.

When we start `\nf@makecol`, `\@colht` already reflects possible wide nonfloats. This to get `\@colroom`, we need to take into account only the narrow ones

```

548 \def\nf@makecol{%
549   \global\@colroom\@colht
550   \ifdim\ht\curr@nfbox@T@uc>0.5\baselineskip
551     \global\@colroom=0pt

```

`\standard@clearpage` The usual `\clearpage` flushes the floats. We keep it in `\standard@clearpage`

```

669 \let\standard@clearpage\clearpage

```

`\clearpage` Now we can define `\clearpage` to take care of the mode:

```

670 \def\clearpage{%
671   \if@twocolumn
672     \nf@clearpage
673   \else
674     \standard@clearpage
675 \fi}

```

`\nf@totalheight` The total height of all non-floats

```

676 \def\nf@totalheight{\dimexpr(
677   \ht\nfbox@S@UL+
678   \ht\nfbox@S@UR+
679   \ht\nfbox@S@LL+
680   \ht\nfbox@S@LR+
681   \ht\nfbox@T@UL+
682   \ht\nfbox@T@UR+
683   \ht\nfbox@W@UL+

```

```

684 \ht\nfbox@W@LL+
685 \ht\nfbox@B@UL+
686 \ht\nfbox@S@ul+
687 \ht\nfbox@S@ur+
688 \ht\nfbox@S@ll+
689 \ht\nfbox@S@lr+
690 \ht\nfbox@T@ul+
691 \ht\nfbox@T@ur+
692 \ht\nfbox@W@ul+
693 \ht\nfbox@W@ll+
694 \ht\nfbox@B@ul)}}

```

`\nf@clearpage` We keep ejecting pages until get rid of nf stuff

```

695 \def\nf@clearpage{%
696 \write\m@ne{}%
697 \if@firstcolumn
698 \ifdim\dimexpr(\pagetotal+\nf@totalheight)>\baselineskip

705 \null\vfill\newpage
706 \fi
707 \ifdim\nf@totalheight>\baselineskip
708 \nf@clearpage\fi
709 }

```

`\clearspread` This is like `\cleardoublepage`, but with the logic inverted:

```

710 \def\clearspread{\clearpage\ifodd\c@page
711 \hbox{}\newpage\if@twocolumn\hbox{}\newpage\fi\fi\@firstcolumntrue}

```

We need to clear everything at the end

```

712 \AtEndDocument{\if@twocolumn
713 \ifdim\nf@totalheight>\baselineskip
714 \null\vfill\clearpage\fi
715 \fi}

```

3.12 Sectioning

`\if@mainmatter` This is used to check whether we are at main matter

```

716 \newif\if@mainmatter

```

`\frontmatter` We want Arabic numbers for front matter:

```

717 \def\frontmatter{%
718 \pagestyle{frontmatterpagestyle}%
719 \onecolumn\@mainmatterfalse}

```

`\mainmatter` We want Arabic numbers for main matter:

```

720 \def\mainmatter{\loadgeometry{standard}\onecolumn
721   \@mainmattertrue}

```

`\tocdepth` Only sections and up are allowed in TOC:

```

722 \setcounter{tocdepth}{1}

```

`\secnumdepth` Only the parts are numbered in our setup:

```

723 \setcounter{secnumdepth}{-1}

```

`\thepart` And the parts are numbered using Arabic numbers:

```

724 \renewcommand \thepart {\@arabic\c@part}

```

`\c@fao@partnum` To draw the blobs in part color in the proper position, we need to associate them with parts. However, some parts are numbered, some are not. The macro `\fao@partnum` keeps the current part number counted continuously from the beginning to end.

```

725 \newcounter{fao@partnum}
726 \setcounter{fao@partnum}{0}

```

`\fao@currentpartnum` The current value of `\fao@partnum` used in TOC:

```

727 \def\fao@currentpartnum{0}

```

`\part` The largest partition in the book

```

728 \renewcommand\part{%
729   \secdef\@part\@spart}

```

`\EndPartIntro` This command switches off the special formatting of part pages:

```

730 \def\EndPartIntro{\clearpage
731 \end{adjmulticols}\clearspread\twocolumn\normalcolor
732 \pagestyle{standardpagestyle}}

```

`iconfill` Fill a line with the icons of increasing size. The parameters are the initial size, length of the strip and the intensity of the background

```

733 \def\@maxpart{1}
734 \def\iconfill#1#2#3{%
735   \expandafter\ifx\csname @icon@1\endcsname\relax\strut\else
736     \@tempcnta=1
737     \setbox\@tempboxa=\hbox{}}%
738   \loop
739     \@tempdima=#1
740     \setbox\@tempboxa=\hbox{\unhbox\@tempboxa
741       \colored@icon@fg[width=\@tempdima]{\csname
742         @icon@the\@tempcnta\endcsname}\#3}\hspace{0.3\@tempdima}}%
743     \advance\@tempcnta by 1\relax
744     \ifnum\@tempcnta>\@maxpart\relax\@tempcnta=1\fi
745     \ifdim\wd\@tempboxa>\#2\else\repeat
746     \unhbox\@tempboxa
747   \fi}

```

`\currenticonfill` Several iterations of the current icon with increasing sizes. The parameters are the initial size, length and the intensity of the background.

```

748 \def\currenticonfill#1#2#3{%
749   \expandafter\ifx\csname @icon@\thepart\endcsname\relax\strut\else
750   \setbox\@tempboxa=\hbox{%
751     \@tempdima=#1
752     \loop
753     \@tempdima=1.44\@tempdima
754     \setbox\@tempboxa=\hbox{\unhbox\@tempboxa
755       \colored@icon@fg[width=\@tempdima]{\csname
756         @icon@\thepart\endcsname}\#3}\hspace{0.2\@tempdima}}%
757     \ifdim\wd\@tempboxa>\#2\else\repeat
758     \unhbox\@tempboxa
759   \fi}

```

`\@part` This is the actual part making macro.

```

841   \vspace*{-2cm}%
842   \def\emph{\textsl}%
843   \begin{adjmulticols}{1}{-1.3cm}{-1.3cm}\centering\normalcolor}%
844   {\end{adjmulticols}\egroup}}
```

`\tablemph` Some styles define `\tablemph` commands. Here we supply a stub

```
845 \AtBeginDocument{\providecommand{\tablemph}[1]{\emph{#1}}}
```

We define new column types for table headers:

```
846 \newcolumntype{d}[1]{D{.}{.}{#1}}
847 \newcolumntype{H}{>\columncolor{@tableheadcolor}[1.01\tabcolsep][1.01\tabcolsep]c}
```

P columntype is much more complex. Basically we want a centered entry with a parbox of the given width inside.:

```
848 \newcolumntype{P}[1]{>\columncolor{@tableheadcolor}[1.01\tabcolsep][1.01\tabcolsep]%
849   \@fao@Pentry{#1}}c<\end@fao@Pentry}}
```

`\@fao@Pentry` Since `\parbox` needs “real” braces to delimit the argument, we use this trick. Note `\hspace{0pt}` to allow T_EX to hyphenate the first word.

```
850 \def\@fao@Pentry#1#2\end@fao@Pentry{%
851   \parbox[t]{#1}{\centering\strut\hspace{\z@}#2\strut}}
```

Same with C entry:

```
852 \newcolumntype{C}[1]{>\columncolor{@tableheadcolor}[1.01\tabcolsep][1.01\tabcolsep]%
853   \@fao@Centry{#1}}c<\end@fao@Centry}}
```

`\@fao@Centry` This macro is similar to `\@fao@Pentry`, but with different way to set the width of the `\parbox`:

```
854 \def\@fao@Centry#1#2\end@fao@Centry{%
855   \settowidth{\@tempdima}{${-99.999$}}%
856   \@tempdima=#1\@tempdima\relax
857   \parbox[t]{\@tempdima}{\centering\strut\hspace{\z@}#2\strut}}
```

`\LT@makecaption` This macro produces the caption for the long tables. We redefine it to get the tables in the way specified by the designer

```
858 \def\LT@makecaption#1#2#3{%
```

```

859 \LT@mc\LT@cols {0}{1}{\cellcolor{white}%
860 \rlap{\fcolorbox{white}{\tableheadcolor}{\normalsize
861 \captionfamily\large\strut
862 \textcolor{white}{#1\MakeUppercase{#2}: }#3}}}%
863 \begin{picture}(0,0)%
864 \put(.5,-7){\color{bgcolor}%
865 \begin{tikzpicture}[baseline=(current bounding box.north)]
866 \fill (0,0) -- (\nf@trianglebase,0) --
867 (.5\nf@trianglebase,-\nf@trianglebase) -- cycle;
868 \end{tikzpicture}}
869 \end{picture}\normalcolor
870 \raisebox{-17pt}{\strut}}

```

3.14 Front Matter

`\@generic` This is a generic macro with two parameters: name of the toc and file extension

```

871 \def\@generic#1#2{\clearpage\loadgeometry{standard}%
872 \pagestyle{frontmatterpagestyle}\onecolumn
873 {\fontsize{48pt}{48pt}\selectfont
874 \captionfamily\color{black!40}#1\par}\@mkboth{#1}{#1}\bigskip
875 \@starttoc{#2}}

```

`\tableofcontents` Our table of contents

```

876 \renewcommand\tableofcontents{\clearpage\loadgeometry{standard}%
877 \pagestyle{frontmatterpagestyle}\onecolumn
878 \@mkboth{\contentsname}{\contentsname}%
879 \makebox[0pt][l]{\fontsize{24pt}{32pt}\selectfont \bfseries
880 \color{black!70}\MakeUppercase{\contentsname}\space}%
881 \par\vspace{-2\baselineskip}\vspace{-\parskip}%
882 \@starttoc{toc}}

```

`\@tocpartskip` This is the skip between the parts in TOC:

```

883 \newlength{\@tocpartskip}
884 \define@key{fao}{tocpartskip}{\setlength{\@tocpartskip}{#1}}
885 \faoset{tocpartskip}=\z@

```

`\@fao@tocrule@start` The start of the current TOC colored rule

```
886 \newdimen\@fao@tocrule@start
```

`\@fao@tocrule@height` The height of the current TOC rule

```
887 \newdimen\@fao@tocrule@height
```

`\@draw@tocrule@part` Drawing the toc rule for a part

```

888 \def\@draw@tocrule@part{\@fao@tocrule@height=\pagetotal
889 \protected@write\@auxout{\string\@fao@partblobbottom{\@fao@currentpartnum}{\the\@fao@tocrule@height}}{\@fao@tocrule@height}{\@fao@tocrule@start}
890 \advance\@fao@tocrule@height-\@fao@tocrule@start
891 \bgroup\parskip\z@
892 \parbox[b][\z@]{\z@}{\hspace*{-15\p@}\color{bgcolor}\rule{2\p@}{\@fao@tocrule@height}}%
893 \parbox[b][\z@]{\z@}{\hspace*{330\p@}}%

```

```

894 \color{bgcolor}\rule{41\p}{\fao@tocrule@height}}%
895 \par\vspace{-0.5\baselineskip}\egroup}

\@draw@tocrule@section Drawing the toc rule for a section
896 \def\@draw@tocrule@section{\fao@tocrule@height=\pagetotal
897 \protected@write\@auxout{}\string\fao@partblobbottom{\fao@currentpartnum}{\the\fao@tocrule@height}
898 \advance\fao@tocrule@height-\fao@tocrule@start
899 \advance\fao@tocrule@height5\p@
900 \bgroup\parskip\z@\small
901 \raisebox{\baselineskip}[\z@][\z@]{\parbox[b][\z@]{\hspace*{-35\p}\color{bgcolor}\rule{41\p}{\fao@tocrule@height}}}%
902 \raisebox{\baselineskip}[\z@][\z@]{\parbox[b][\z@]{\hspace*{310\p}}}%
903 \color{bgcolor}\rule{41\p}{\fao@tocrule@height}}%
904 \par\vspace{-\baselineskip}\egroup}

\l@part This prints the part in TOC:
905 \renewcommand*\l@part[2]{%
906 \ifnum \c@tocdepth >-2\relax
907 \addpenalty{-\@highpenalty}%
908 \setlength\@tempdima{3em}%
909 \addvspace{\@tocpartskip}%
910 \begingroup

We store the current vertical position of the page into \fao@tocrule@start
911 % \addvspace{-2pc}\par
912 \fao@tocrule@start=\pagetotal
913 \protected@write\@auxout{}\string\fao@partblobtop{\fao@currentpartnum}{\the\fao@tocrule@start}
914 \parindent \z@ \rightskip \@pnumwidth
915 \parfillskip -\@pnumwidth
916 \leftskip180\p@
917 {\leavevmode
918 \color{bgcolor}\bfseries\partname\space#1:

940     \nobreak
941     \global\@nobreaktrue
942     \everypar{\global\@nobreakfalse\everypar{}}%
943   \endgroup
944 \fi}

```

`\l@section` This prints the section in TOC:

```

945 \renewcommand*\l@section[2]{%
946   \ifnum \c@tocdepth >-2\relax
947     \addpenalty{-\@highpenalty}%
948     \setlength\@tempdima{3em}%
949     \begingroup
950     \small
951     \@fao@tocrule@start=\pagetotal
952     \leftskip200\p@\relax\parskip\z@
953     \parindent \z@ \rightskip \@pnumwidth
954     \parfillskip -\@pnumwidth
955     {\leavevmode\small\strut
956       #1\hfil \hb@xt@{@pnumwidth{\hss #2}}\par\@draw@tocrule@section
957     \nobreak
958     \global\@nobreaktrue
959     \everypar{\global\@nobreakfalse\everypar{}}%
960   \endgroup
961 \fi}

```

`\appendix` We do not draw colored rules in the TOC part of the appendix:

```

962 \renewcommand\appendix{%
963   \bookmarksetup{startatroot}%
964   \addtocontents{toc}{\string\let\string\@draw@tocrule@part\string\relax
965     \string\let\string\@draw@tocrule@section\string\relax}}

```

We use special formatting of metadata in the lists of... This requires explicit `\pars` at the end:

```

966 \AtEndDocument{%
967   \immediate\write\@auxout{\string\@writefile{loc}{\string\par}}%
968   \immediate\write\@auxout{\string\@writefile{lot}{\string\par}}%
969   \immediate\write\@auxout{\string\@writefile{lom}{\string\par}}}

```

`\nf@dottedtocline` This is like the standard `\dottedtocline`, but with colored page numbers

```

970 \def\nf@dottedtocline#1#2#3#4#5{%
971   \ifnum #1>\c@tocdepth \else
972     \vskip \z@ \@plus.2\p@
973     {\leftskip #2\relax \rightskip \@tocrmarg \parfillskip -\rightskip
974       \parindent #2\relax\@afterindenttrue
975       \interlinepenalty\@M

```

```

976 \leavevmode
977 \@tempdima #3\relax
978 \advance\leftskip \@tempdima \null\nobreak\hskip -\leftskip
979 {#4}\nobreak
980 \leaders\hbox{$\m@th
981 \mkern \dotsep mu\hbox{.}\mkern \dotsep
982 mu$}\hfill
983 \nobreak
984 \hb@xt@\@pnumwidth{\hfil\normalfont\color{@bgcolor}#5}%
985 \par}%
986 \fi}

\l@nonfloat The generic listing of a nonfloat in a list
987 \newcommand*\l@nonfloat{\nf@dottedtocline{1}{\z@}{2.3em}}

\numberline The number in table of contents
988 \def\numberline#1{%
989 \raisebox{\z@}[\z@][\z@]{%
990 \fcolorbox{@bgcolor}{@bgcolor}{%
991 \hb@xt@\@tempdima{\color{white}#1\strut\hfil}}}\hspace{2em}}

\listofmaps Our list of maps
992 \newcommand\listofmaps{\@generictoc{\listofmapsname}{lom}}

\l@map Entry in the list of maps
993 \let\l@map\l@nonfloat

\listoftables Our list of tables
994 \renewcommand\listoftables{\@generictoc{\listtablename}{lot}}

\l@table Entry in the list of tables
995 \let\l@table\l@nonfloat

\listofcharts Our list of charts
996 \newcommand\listofcharts{\@generictoc{\listofchartsname}{loc}}

\l@chart Entry in the list of charts
997 \let\l@chart\l@nonfloat

```

3.15 Metadata

```

\metadatassection The section for metadata:
998 \newcommand\metadatassection[1]{\clearspread\twocolumn\normalcolor
999 \section{#1}}

@indicatorsquarecolor The color for the little squares in the indicator section
1000 \define@key{fao}{indicatorsquarecolor}{%
1001 \colorlet{@indicatorsquarecolor}[cmyk]{#1}}
1002 \faoset{indicatorsquarecolor=gray}

```

`\metadata` This starts the metadata section. The commands inside are local to the metadata.

```

1003 \def\metadata#1{\bgroup
1004     \def\meta@key{@@@}%

```

Now we define the commands for metadata:

`\key` This sets the key:

```

1005     \def\key##1{\NR@getttitle{##1}\phantomsection\label{##1}%
1006     \gdef\meta@key{##1}}

```

`\source` This typesets the source:

```

1007     \def\source##1{\textbar\,\emph{Source: }##1. }%

```

`\owner` This typesets the owner:

```

1008     \def\owner##1{\textbar\,\emph{Owner: }##1. }%

1009     \begin{list}{\topsep8\p@\labelwidth\z@
1010         \labelsep\z@\itemindent\z@\parsep0.4ex plus 0.5ex minus
1011         0.2ex\relax\listparindent\z@\leftmargin\z@\rightmargin\z@
1012         \partopsep\z@}%
1013     \item{\bfseries{\color{@indicatorsquarecolor}$\blacksquare$}~#1\par\penalty10000}}

```

`\endmetadata` This closes the environment:

```

1014 \def\endmetadata{%
1015     \expandafter\ifx\csname
1016         metaback@\meta@key\endcsname\relax
1017     \else
1018         \textbar\,\emph{Referenced in: }
1019         \csname metaback@\meta@key\endcsname
1020     \fi
1021     \end{list}\egroup}

```

`\refMetadata` The way we actually reference the metadata:

```

1022 \def\refMetadata#1{%
1023     \ifx\@captive\@undefined\def\@captive{table}\fi
1024     \if@filesw
1025         \immediate\write\@mainaux{%
1026             \string\faometaback{#1}\@captive}\csname the\@captive\endcsname}\thepage}\@current
1027     \fi
1028 }

```

`\faometaback` This reads the backreferences to metadata and prepares the the list. The arguments are: key, float type, number of float, page and hyperref

```

1029 \def\faometaback#1#2#3#4#5{%
1030     \expandafter\ifx\csname metaback@#1\endcsname\relax
1031     \expandafter\gdef\csname metaback@#1\endcsname{%
1032         \hyper@linkstart{link}{#5}#2~#3\hyper@linkend}%
1033     \else
1034         \expandafter\g@addto@macro\csname metaback@#1\endcsname{,
1035         \hyper@linkstart{link}{#5}#2~#3\hyper@linkend}%
1036     \fi}

```

3.16 Further Reading

`\fitemize` This is the special version of `itemize` for further reading pages. Basically it is a patched kernel version.

```
1037 \def\fitemize{%
1038   \ifnum \@itemdepth >\thr@@\@toodeep\else
1039     \advance\@itemdepth\@ne
1040     \edef\@itemitem{labelitem\romannumeral\the\@itemdepth}%
1041     \expandafter
1042     \list
1043       \csname\@itemitem\endcsname
1044       {\def\makelabel##1{\space}\parskip\z@\topsep\z@
1045        \itemsep\z@\labelwidth\z@\parsep\z@\partopsep\z@
1046        \leftmargin\z@\labelsep\z@}%
1047   \fi}
```

`\endfitemize` This is standard:

```
1048 \let\endfitemize=\endlist
```

`\freading` This is the “Further Reading environment”

```
1049 \newenvironment{freading}{%
1050   \bgroup
1051   \fboxsep=5\p@
1052   \let\itemize=\fitemize
1053   \let\enditemize=\endfitemize
1054   \setbox\@tempboxa=\hbox\bgroup
1055   \begin{minipage}{0.9\columnwidth}\parskip\z@
1056   {\color\@bgcolor}\bfseries
1057     \makebox[\z@][r]{%
1058       \tikz\fill[color=\@bgcolor] (0,0) -- (1.5ex,0) -- (1.5ex, 1.5ex) --
1059       cycle;\hspace{5\p@}}%
1060   Further reading\strut\par}}{\end{minipage}\egroup
1061   \par\vspace{12mm}%
1062   \hspace{\dimexpr(0.1\columnwidth-10\p@)}%
1063   \fcolorbox{\@bgcolor!10}{\@bgcolor!10}{\box\@tempboxa}%
1064   \egroup}
```

3.17 Publications

`\@publicationskip` Skip between the publications. By default `\medskip`:

```
1065 \newlength{\@publicationskip}
1066 \define@key{fao}{publicationskip}{\setlength{\@publicationskip}{#1}}
1067 \faoset{publicationskip=6pt plus 2pt minus 2pt}
```

`\@publicationparskip` Paragraph skip between the publications.

```
1068 \newlength{\@publicationparskip}
1069 \define@key{fao}{publicationparskip}{\setlength{\@publicationparskip}{#1}}
1070 \faoset{publicationparskip=6pt plus 6pt minus 4pt}
```

`\publication` This typesets one publication:

```

1071 \newenvironment{publication}[2][]{%
1072   \gdef\@pub@cover{#1}%
1073   \par
1074   \raisebox{\dimexpr(-\baselineskip-\totalheight)}{%
1075     \ifx\@pub@cover\empty\rule{0.4\columnwidth}{\z@}\else
1076       \includegraphics[width=0.4\columnwidth]{\@pub@cover}\fi}
1077   \hspace{0.1\columnwidth}%
1078   \begin{minipage}[t]{0.49\columnwidth}%
1079     \setlength\parskip{\@publicationparskip}%
1080     {\bfseries\large\color{\bgcolor}\#2\par}
1081     \long\def\pDescription##1{\par##1\par}%
1082     \def\pEdition##1##2{\par##1: ##2\par}%
1083     \def\pCycle##1{\par Publication cycle: ##1\par}%
1084     \def\pWeb##1{\par \raggedright Webpage: \url{##1}\par}}%
1085   \end{minipage}%
1086   \par
1087   \vspace{\@publicationskip}}

```

`\@resourcesicon` he icon for resources

```

1088 \define@key{fao}{resourcesicon}{\gdef\@resourcesicon{#1}}
1089 \faoset{resourcesicon={}}

```

`\@resourcesname` he icon for resources

```

1090 \define@key{fao}{resourcesname}{\gdef\@resourcesname{#1}}
1091 \faoset{resourcesname={Key Resources}}

```

`\KeyResources` ere we start resources section

```

1092 \def\KeyResources{\clearpage\phantomsection
1093   \ifx\@resourcesicon\empty\else
1094     \def\@partpagepicture{%
1095       \put(190,-36){\colored@icon[width=1.2cm]{\@resourcesicon}}%
1096       \gdef\@partpagepicture{}}
1097     \fi
1098     \addcontentsline{toc}{section}{\@resourcesname}%
1099     \ifx\@resourcesicon\empty\else
1100       \hspace*{1.3cm}%
1101       \fi
1102       {\color{\bgcolor}\Large\bfseries\raggedright\@resourcesname\par
1103         \vspace{2.3ex \@plus.2ex}}

```

3.18 Subscripts

`\textsubscript` This follows standard L^AT_EX:

```

1104 \DeclareRobustCommand*\textsubscript[1]{%
1105   \@textsubscript{\selectfont#1}}
1106 \def\@textsubscript#1{%
1107   {\m@th\ensuremath{_{\mbox{\fontsize\sfontsize\z@#1}}}}}

```

3.19 LyX code

`\lyxlist` It seems Lyx wants this:

```
1108 \newenvironment{lyxlist}[1]
1109 {\begin{list}{\setlength{\leftmargin}{\labelwidth}
1110 {\setlength{\leftmargin}{\labelwidth}
1111 \setlength{\leftmargin}{\labelwidth}
1112 \addtolength{\leftmargin}{\labelsep}
1113 \renewcommand{\makelabel}[1]{##1\hfil}}
1114 {\end{list}}
```

3.20 Bibliography

`\thebibliography` Our bibliography is a section rather than a chapter.

```
1115 \renewenvironment{thebibliography}[1]
1116 {\section{\bibname}%
1117 \list{\@biblabel{\@arabic{c@enumiv}}}%
1118 {\setlength{\labelwidth}{\@biblabel{#1}}%
1119 \leftmargin\labelwidth
1120 \advance\leftmargin\labelsep
1121 \@openbib@code
1122 \usecounter{enumiv}%
1123 \let\p@enumiv\@empty
1124 \renewcommand\theenumiv{\@arabic{c@enumiv}}}%
1125 \sloppy
1126 \clubpenalty4000
1127 \@clubpenalty \clubpenalty
1128 \widowpenalty4000%
1129 \sfcode'\.\@m}
1130 {\def\@noitemerr
1131 {\@latex@warning{Empty 'thebibliography' environment}}}%
1132 \endlist}
```

3.21 The final word

```
1133 \setbgcolor{gray}\selectcolor
1134 \loadgeometry{standard}%
1135 \pagestyle{empty}
1136 \normalsize\normalfont
1137 </class>
```
