# New LATEX Style for FAO Yearbook \*

Boris Veytsman $^{\dagger}$  2013/12/19, v1.6

#### Abstract

This package provides class for typesetting FAO Yearbook. This is a refactoring of the faoyeabook package

## 1 Introduction

The package faoyearbook [1] was written in 2011 for FAO Statistical Yearbook.

The package faosyb is a refactoring of this package. We use the lessons learned and incorporate new design requirements. We use some (actually plenty) code from the previous version, but since we do not have to be compatibility, we can correct some unfortunate decisions.

# 2 User Guide

The installation of the class follows the usual practice [2] for LATEX packages:

- 1. Run latex on faosyb.ins. This will produce the LATEX class faosyb.cls.
- 2. Put the file faosyb.cls to the place where LATEX can find it (see [2] or the documentation for your TEX system).
- 3. Update the database of file names. Again, see [2] or the documentation for your TEX system for the system-specific details.
- 4. The file faosyb.pdf provides the documentation for the package (this is the file you are probably reading now).

As an alternative to items 2 and 3 you can just put the file faosyb.cls in the working directory where your .tex file is.

<sup>\*©2013,</sup> Food and Agriculture Organization of the United Nations

#### 2.1 Invocation

To use the class, put in the preamble of your document

 $\documentclass[\langle options \rangle] \{faosyb\}$ 

If the option web is chosen, the pages of the book have the dimensions corresponding to A4 paper. However, if the option print is chosen, then the pages are printed on a wider area, and crop marks are added for the trimming. Either web or print option must be chosen: there is no default.

If the option issuu is chosen, the internal links are transformed to external in the form suitable for <a href="http://www.issuu.com">http://www.issuu.com</a>. Note that this option probably does not make much sense unless web option is also chosen. However, it is still possible to select both print and issuu option if someone needs it for an obscure purpose.

The option Draft (note the capitalization!) leads to the the large word 'DRAFT' printed across the pages. The standard LATEX option draft leads to the same result, but it also makes other changes, most notably, in the behavior of the \includegraphics command and warnings.

\ifprint

It is possible to query the current mode using the macro \ifprint, for example

```
\ifprint
Stuff for print version
\else
Stuff for web version
\fi
```

Any branch of this conditional may be empty, so web-only stuff can be coded as

\ifprint\else Web-only stuff\fi

\includegraphics

There is a special facilty for \includegraphics command to choose a file depending on the current mode of the package. Namely, if there is a file image\_print.pdf visible by IATEX, then the commands \includegraphics{image} or \includegraphics{image.pdf} selects the file image\_print.pdf. In the case this file is not found, the file image.pdf is selected instead. Similarly in the web mode the file image\_web.pdf will be selected first, and only if it does not exist, image.pdf is selected. This rule works also for commands \includeLargeGraphics and \includeExtraLargeGraphics described below.

Note that at this time there is no similar facility for the \input command.

#### 2.2 Setting Parameters

\faoset Some parameters in the class can be set with the command \faoset{ $\langle key=value \rangle$ }, for example

\faoset{bgcolor=blue}

Most of the parameters are explained below.

One of the important parameters is year. While the package at this time does not provide facilities for the title pages, it needs to know the year for the proper typesetting of footers. The command

```
\faoset{year=2013}
```

is used to provide this information.

# 2.3 Fonts

\narrowfamily \textnarrow \captionfamily \textcaption The class uses PT Sans fonts [3] for body text and Arev fonts [4] for math. It defines two additional families: Narrow and Caption, corresponding to the PT Sans Narrow and PT Sans Caption font. They can be selected by the declarations  $\arrowfamily$  and  $\arrowfamily$  or by the commands  $\textnarrowf(\text)$  and  $\textcaptionf(\text)$  following the usual LATEX conventions. Note that since PT Sans does not provide math alphabet, this choice does not change the mathematical text.

PT Sans Narrow may be useful for typesetting tables, for example,

```
{\scriptsize\narrowfamily
\rowcolors{4}{@bgcolor!30}{@bgcolor!20}
\input{./Tables/P1.DEM_1.tex}}
```

The choice of \narrowfamily is automatically done by the tablepages environment.

#### 2.4 Colors and Icons for Parts

A Yearbook is separated into parts (more on this below). Each part has its own color and icon. They are set by the keys bgcolor and icon of the \faoset command, for example,

```
\faoset{icon=./Icons/agriculture.png}
\faoset{icon=./Icons/population}
\faoset{bgcolor=blue}
\faoset{bgcolor=green!25!yellow}
```

The parameter for the icon key can be any file name (with or without extension), suitable for the \includegraphics command. The parameter for the bgcolor key can be specified in any form acceptable by xcolor package [5].

The key tableheadcolor sets the color for the headers of tables defined by H or P key (see Section 2.7). Normally it is the current @bgcolor color, but it can be set to any required value.

\selecticon \selectcolor

Note that \faoset command does not change the icon or background color immediately. When issued before \part command, it sets up icon and color for

the next part. If needed, you can manually change this using \selection and \selectcolor commands. In most cases you should *not* use these commands.

@bgcolor
@tableheadcolor
\currenticon

After a \part command (or explicit \selection and \selectcolor command we can access the current values of the color in @bgcolor, @tablecolor colors and \currenticon macro.

Foreword and other parts in the front matter of the book do not use icons. Instead they have geometric symbols. The key symbol can have the values righthtriangle, square, rightsemicircle and sets the symbol for such part.

\lettrine

Front matter uses dropped capitals (lettrines) in the beginning of the sections. The command \lettrine{W}{ord} can help in this case.

# 2.5 Sectioning

\part \section \subsection The main division of the text are \parts. The command \part{ $\langle title \rangle$ } is used for numbered parts, while the command \part\*{ $\langle title \rangle$ } is used for unnumbered parts. The next division are \sections and \subsections. They are never numbered. The style does not use \chapters.

\EndPartIntro

The sections immediately following new parts are special: they are typeset in one column and cannot have floats. The command \EndPartIntro switches to the "normal" sections.

### 2.6 Headers and Footers

\evenfootmark \oddfootmark

Normally headers and footers are defined by the text. However, there is a possibility to change some of them. Commands  $\operatorname{commands} \operatorname{cotmark} \{\langle text \rangle\}$  and  $\operatorname{cotmark}$  set the right and left footers for even and odd pages correspondingly (the remaining footers are used by the page numbers). By default they are defined as

\evenfootmark{\textbf{FA0} Statistical Yearbook \textbf{\fao@year}}
\oddfootmark{\rightmark}

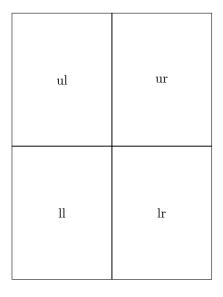

The last command sets the footer to be the current section name (or part name before the first section), but the user can change this.

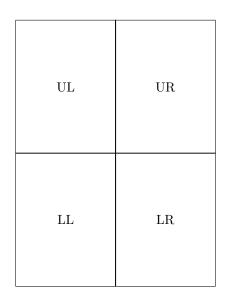

#### 2.7 Floats

One of the most important changes from the previous version of the class [1] is the treatment of floats.

In standard IATEX floats "float": they can be placed by the algorithm anywhere. The previous version made them "sticky": the author explicitly tells TEX where floats should be placed. However, to do so the class required the author to make explicitly page breaks, which was not very convenient.

This version has a completely rewritten interface and algorithm for placing floats:

Verso page

Recto page

Figure 1: A Spread

- 1. Like in standard L<sup>A</sup>T<sub>E</sub>X, authors do not normally provide page breaks—T<sub>E</sub>X tries to make this decision for them.
- 2. Like in the previous version, floats are put exactly where the authors want them—no default placing and second-guessing.

Here is how it is done.

The main unit of the book is *spread*: a verso page and the corresponding recto page. Each page is divided into four quarters, upper left, upper right, lower left and lower right. We will denote them ul, ur, ll, lr for the verso page and UL, UR, LL, LR for the recto page (Figure 1). We allow four kinds of floats:

Single floats occupy exactly one quarter. They are denoted as S.

Tall floats occupy two quarters stacked vertically (for example, ul and 11). They are denoted as T.

Wide floats occupy two quarters adjacent horizontally (for example, LL and LR). They are denoted as W.

Big floats occupy all four quarters on a page. They are denoted as B.

The parameters  $\{\langle type \rangle\}$  and  $\{\langle location \rangle\}$  are mandatory for floats, for example

```
\begin{map}{T}{ur}
...
\end{map}
\begin{chart}{S}{UL}
...
\end{chart}
```

For multiquarter floats the location is the location of the upper left corner, so Big float can use only ul or UL location.

Of course, not all combinations are valid: you cannot specify float as {T}{11} or {W}{UR}, for example. If you use such combinations, the results may be unpredictable. Also it is not predictable what happens if you try to put overlapping floats (e.g. {S}{UR} and {W}{UL}).

There are two additional rules:

- 1. A verso page may have text and floats (still it is recommended that if it has text, then it should not have floats occupying the upper left corner).
- 2. A recto page may have *either* text or floats: if there are floats for this page, all text is moved to the following verso page.

chart

There are three types of floats defined by the class:

map table

chart plots and other charts,

map mapped data.

table mini tables.

caption

Each of these kinds of material is typeset using the corresponding environment: chart, table or map. Note that the caption for each of these environments must precede the graphical material, for example:

```
\begin{chart}{B}{UL}
  \caption{Hunger Data}
  \label{chart:hunger}
  \includegraphics{hunger.pdf}
\end{chart}
```

Note that our class redefines table environemnt!. For tables on separate pages use longtable.

\chartwidth \chartheight

Inside a chart, map or table it is useful to know the size allocated for the graphics or table, for example, to be able to scale the graphics. Two lengths, \chartwidth and \chartheight provide this information, so the user can say, for example,

\includegraphics[width=\chartwidth, height=\chartheight]{theChart}

\source

Inside a a chart, map or table the macro \source{ $\langle source \rangle$ } gives the source of the information, for example,

\Source{FAO, Statistical Division [FAOSTAT]}

\listoftables \listofcharts \listofmaps The standard LATEX has the command \listoftables to produce the list of tables in the document. Our class retains this command and produces two additional commands \listoftharts and \listoftharps with the obvious meaning.

# 2.8 Page Breaks

\clearpage \cleardoublepage \clearspread Standard IATEX has commands for immediate page break (e.g. \clearpage) and for switching to the next recto page, possibly ejecting the next verso page (\cleardoublepage). The class provides another command \clearspread. It switches to the next verso page, possibly ejecting the next recto page (and putting there floats intended for this page, if any).

#### 2.9 Tables

tablepages

The tables at the end of a part should be typeset inside tablepages environment. The environment switches to the one column setup, decreases the margins and changes the font to \narrowfamily.

To typeset numericall items one should use  $\mathtt{d}$  column identifier with the format  $\mathtt{d}\{\langle a.b \rangle\}$ , where a is the number of decimal in the integer part of the number, and b is the number of decimal digitst in the fractional part. For example, a number 12.345 corresponds to  $\mathtt{d}\{2.3\}$ . The column headers are usually *not* numerical, so one need to use \multicolumn entries to typeset them. The class defines several such entries:

**H** produces a centered entry.

P produces an entry of a given length, for example, P{1.5cm}

C produces an entry of the length corresponding to the given number of numerical columns. For example,  $C\{2\}$  corresponds to a header of two numerical columns. Each column is assumed to be of the size enough to store -99.999.

\hhline

For the rules that do not span the table width  $\hhline{\langle specification\rangle}$  command from the hhline package should be used. The  $\{\langle specification\rangle\}$  argument of this command has many variants, but for our purposes we need only one variant: the command – produces a horizontal line spanning one column. The color of this line is determined by the command  $\arrayrulecolor\{\langle color\rangle\}$ , issued in the last  $\arrayrulecolor\{\alpha tableheadcolor\}\}$  – produces a line of the color  $\arrayrulecolor\{\alpha tableheadcolor\}\}$  – produces a black line spanning three columns.

Thus if we have a four-column table and want a rule spanning columns 2–3, the following command should be issued:

```
\hhline{>{\arrayrulecolor{@tableheadcolor}}-% Column 1, no rule >{\arrayrulecolor{black}}--% Columns 2 and 3, black rule >{\arrayrulecolor{@tableheadcolor}}-}% Column 4, no rule
```

The usual \* specification may be used for repeating patterns, for example,  $*\{5\}\{-\}$  is equivalent to ----.

The vertical bar | specification in the \hhline argument means an interruption of the line. The interruption is by defalut a black interval, to make it the same color as the header background, use >{\arrayrulecolor{@tableheadcolor}}|.

The design of the tables in the current edition requires several important changes to the usual tables:

- 1. There should be no \toprule at the beginning of a table.
- 2. The first row header of a table must be empty and white; this is done by the command \cellcolor{white} in this cell.
- 3. \hhline separating rows in the header must not go through this first white cell; this is done by the ~ specificaton.

# 2.10 Publication Descriptions

\KeyResources

Publication descriptions normally are collected in a special section inside part introduction. This section is introduced by the command \KeyResources. There are two options that must be set by \faoset to use by this command: resourcesicon and resourcesname. The first is the filename of the icon used for section heading, the second is the name of the section, for example

```
\faoset{resourcesicon=icons/resources.png,
  resourcesname={Key Resources}}
```

publication

be put inside the environment publication. The environment has one mandatory argument, which is the title of the publication, and one optional argument, which sets the file name of the publication cover. Note that the option argument, if present, must precede the mandatory one. If this argument is absent, no cover is included. Inside the environment the macros  $\poline{description}\$ ,  $\poline{description}\$ ,  $\poline{description}\$ , are used to typeset the corresponding items related to the publication. For example,

FAO yearboook describes some FAO publications. These publications should

\pDescription \pEdition \pCycle pWeb

\begin{publication}[./Plots/StateOfFoodAndAgriculture.png]{The State
 of Food and Agriculture}

\pDescription{The State of Food and Agriculture, FAO's major annual flagship publication, aims at bringing to a wider audience balanced science-based assessments of important issues

```
in the field of food and agriculture. Each edition of the
report contains a comprehensive, yet easily accessible, overview
of a selected topic of major relevance for rural and
agricultural development and for global food security. This is
supplemented by a synthetic overview of the current global
agricultural situation.}
\pEdition{2010}{Livestock in the balance}
\pEdition{2011}{Women in Agriculture Closing the gender gap for
development}
\pCycle{May each year}
\pWeb{http://www.fao.org/docrep/013/i2050e/i2050e00.htm}
\end{publication}
```

Note that, as in the example, some fields may be repeated.

publicationparskip
 publicationskip

Two spacing parameters can be used for typesetting of publications: publicationskip is the amount of additional space between the publications, while publicationparskip is the space between the paragraphs inside the publication environment. The default values correspond to the command

```
\faoset{publicationskip=6pt plus 2pt minus 2pt,
publicationparskip=6pt plus 6pt minus 4pt}
```

#### 2.11 Metadata

\metadatasection

The sources of the data are collected in special sections called "Metadata section". Each section is introduced by the command  $\mbox{metadatasection}\{\langle title \rangle\}$ , for example,

\metadatasection{Indicators}

metadata

The sources themselves are collected in the metadata environments. Each environment has one obligatory argument—the name of the source. It may include the following commands:

\key  $\{\langle key \rangle\}$  sets the corresponding key which is used for labeling the metadata

\source \source $\{\langle source \rangle\}$  sets the source of the data.

\owner \owner $\{\langle owner \rangle\}$  sets the owner of the data.

Note that there is no "description" command because any text which is not an argument of the commands above is considered to belong to the description of the data.

Example of the usage of these commands:

```
\metadatasection{Indicators}
\begin{metadata}{Agricultural population}
\key{agripop}%
```

Agricultural population is defined as all persons depending for their livelihood on agriculture, hunting, fishing and forestry. It comprises all persons economically active in agriculture as well as their non-working dependents. It is not necessary that this referred population exclusively come from rural population. \source{FILL ME} \owner{FILL ME}

Each indicator is preceded by a square, normally grey-colored. The command \faoset with the key indicatorsquarecolor can be used to set the color of the square, for example

\faoset{indicatorsquarecolore={black!10}}

\refMetadata

The metadata is referenced by the command  $\mathbf{\xi}(key)$ , for example  $\mathbf{\xi}(key)$ , for example  $\mathbf{\xi}(key)$ 

This command will not be typeset, but makes creates a backreference to the corresponding chart from the indicator section.

Note that the package automatically provides backreferencing: all charts, maps and tables where the medatada is referenced, are mentioned in the corresponding metadata section.

## 2.12 Further Reading

freading

The special environment freading is used for the "further reading" sections of the book. It starts the text from the new page and changes some defaults.

### 2.13 Subscripts in Text

 $\text{\textsubscript}$ 

The standard  $\LaTeX$  defines \textsuperscript. The class adds a similar \textsubscript command.

# 3 Implementation

# 3.1 Options

```
\faoyearbook@size@warning
                           The font-changing options are not used in our setup, so we just produce a warning:
                              1 \long\def\faoyearbook@size@warning#1{%
                                 \ClassWarning{faoyearbook}{Size-changing option #1 will not be
                                   honored}}%
                              4 \DeclareOption{8pt}{\faoyearbook@size@warning{\CurrentOption}}%
                              5 \DeclareOption{9pt}{\faoyearbook@size@warning{\CurrentOption}}%
                              6 \DeclareOption{10pt}{\faoyearbook@size@warning{\CurrentOption}}%
                              7 \DeclareOption{11pt}{\faoyearbook@size@warning{\CurrentOption}}%
                              8 \DeclareOption{12pt}{\faoyearbook@size@warning{\CurrentOption}}%
                 \ifprint We have a flag shich shows whether we are in Web or print mode
                              9 \newif\ifprint
                             10 \printfalse
                             11 \DeclareOption{web}{\printfalse
                             12 \PassOptionsToPackage{paper=a4paper}{geometry}}
                             13 \DeclareOption{print}{\printtrue
                                 \PassOptionsToPackage{papersize={230mm,317mm},
                                   layouthoffset=1cm,layoutvoffset=1cm}{geometry}}
                             15
                 \ifDraft If we are in 'Draft' or 'draft mode', we print a word 'draft' across the page:
                             16 \newif\ifDraft
                             17 \Draftfalse
                             18 \DeclareOption{Draft}{\Drafttrue}
                             19 \DeclareOption{draft}{\Drafttrue}
            \if@issuumode Whether we need issuu-style links
                             20 \newif\if@issuumode
                             21 \@issuumodefalse
                             22 \DeclareOption{issuu}{\@issuumodetrue}
                               All other options are just sent to the main class:
                             23 \DeclareOption*{\PassOptionsToClass{\CurrentOption}{report}}
                             24 \ProcessOptions\relax
                                  Loading Class and Packages
                           We start with the base class and some packages
                             25 \LoadClass[10pt,twoside,twocolumn]{report}
                             26 \RequirePackage{graphicx,xkeyval}
                             27 \RequirePackage[table,cmyk] {xcolor}
                             28 \RequirePackage{tikz,dcolumn}
                             29 \RequirePackage{geometry}
                             30 \usetikzlibrary{calc}
                             31 \RequirePackage{fancyhdr}
                             32 \RequirePackage{lscape,longtable,siunitx,booktabs}
```

```
33 \RequirePackage{multicol,atbegshi,picture,hhline,afterpage}
 34 \RequirePackage[T1]{fontenc}
 35 \RequirePackage[utf8x]{inputenc}
 36 \RequirePackage{pdfpages}
 37 \RequirePackage[authoryear]{natbib}
 38 \RequirePackage[breaklinks]{hyperref}
 39 \RequirePackage{bookmark}
 40 \RequirePackage{adjmulticol,lettrine}
 41 \if@issuumode
 42 \RequirePackage{issuulinks}
 43 \fi
   Options for the hyperef package are set as follows:
 44 \hypersetup{breaklinks,colorlinks=false,pdfborder=0 0 0,
      pdfauthor={FAO},
      pdfsubject={Statistical Yearbook of the Food And Agricultural Organization for the United No
      pdftitle={Statistical Yearbook of the Food And Agricultural Organization for the United Nat:
      pdfkeywords={FAO, Food Security, Undernourishment, Sustainable agriculture},
      pdfpagelayout=TwoColumnLeft,
     pdfnewwindow=true
 51 }
3.3
      Color
We need to tell the printer that we are using CMYK color model. The following
is taken from the pdfx package (the package itself is not too easy to make work).
 52 \def\@pctchar{\expandafter\@gobble\string\%}
 53 \def\@bchar{\expandafter\@gobble\string\\}
 54 \immediate\pdfobj stream attr{/N 4} file{FOGRA39L.icc}

64 >> ]}

\LettrineFontHook We want the drop caps to have @bgcolor

65 \renewcommand\LettrineFontHook{\color{@bgcolor}}

\DefaultFindent The distance between the dropped capital and the text

#### 3.4**Key-Value Interface**

66 \setlength\DefaultFindent{2pt}

We define the family fao for our keys: 67 \def\faoset#1{\setkeys{fao}{#1}}

```
One of the important keys is year
                  68 \define@key{fao}{year}{\gdef\fao@year{#1}}
                  69 \faoset{year=20XX}
                3.5
                      Fonts
                We use arev for mathematics:
                  70 \RequirePackage{arevmath}
                   For body text we use PT Sans:
                  71 \def\PTSans@scale{0.95}
                  72 \def\PTSansNarrow@scale{0.95}
                  73 \def\PTSansCaption@scale{0.95}
                  74 \renewcommand{\sfdefault}{PTSans-TLF}
                  75 \renewcommand{\familydefault}{\sfdefault}
                  76 \renewcommand{\bfdefault}{b}
 \narrowfamily We declare a new family, \narrowfamily:
                 77 \DeclareRobustCommand\narrowfamily{\fontfamily{PTSansNarrow-TLF}\selectfont}
   \textnarrow And the matching \textnarrow command:
                  78 \DeclareTextFontCommand{\textnarrow}{\narrowfamily}
\captionfamily Same with \captionfamily:
                  79 \verb|\DeclareRobustCommand\captionfamily{PTSansCaption-TLF}\selectfont|
  \textcaption And the matching \textcaption command:
                  80 \DeclareTextFontCommand{\textcaption}{\captionfamily}
   \normalsize The basic size is 9.6pt:
                  81 \renewcommand\normalsize{%
                       \@setfontsize\normalsize{9.6pt}{\@xiipt}%
                       \abovedisplayskip 10\p@ \@plus2\p@ \@minus5\p@
                  83

## 3.7 Cropmarks

There are several packages that provide crop marks. Unfortunately they do not work for us because they put crop marks at the background. Since we have colored pages, we want crop marks to be on the foreground.

In this section we re-implement cropmarks of the geometry package, putting the marks on the foreground.

We postpone the code to the beginning of the document to get the proper value of the switch

                                                                                                                                   \setlength\fboxsep{10\p0}%
                                                                                                  261
                                                                                                                                   \color{@bgcolor}%
                                                                                                  262
                                                                                                  263
                                                                                                                                    \raisebox{-\height}{\hspace*{25\p0}\@oddfootmark}%
                                                                                                  264
                                                                                                                                    \normalsize\dotfill
                                                                                                                                    \raisebox{-\height}{\@foliobox}%
                                                                                                  266
                                                                                                                          \egroup}%
```

\fao@partblobtop \fao@partblobbottom Some pages have "part blobs": colored blobs on the specific positions of the page. These macros set the top and the bottom of the blob corresponding to the part set in the second parameter:

```
268 \def\fao@partblobtop#1#2{\expandafter\gdef\csname fao@blobstart#1\endcsname{#2}} 269 \def\fao@partblobbottom#1#2{\expandafter\gdef\csname fao@blobend#1\endcsname{#2}}
```

#### 3.10 Nonfloats

267 }

In Faoyearbook we used float package. Since we changed too much in the internals, here we just rewrite the code from scratch.

\@toc@ext@list Added macro Comma-separated list of extensions for toc-like files:

270 \gdef\@toc@ext@list{toc}

\nf@vert@sep Vertical separation between the floats

271 \newlength\nf@vert@sep 272 \setlength\nf@vert@sep{10mm}

\nf@width The width of the nonfloat

273 \newlength\nf@width

\nf@height The height of the nonfloat

274 \newlength\nf@height

\nf@captionheight The height reserved for the caption

275 \newlength\nf@captionheight 276 \setlength\nf@captionheight{11mm}

\nf@sourceheight The height reserved for the source lines

277 \newlength\nf@sourceheight

278  $\ensuremath{\ensuremath{\texttt{0}}}$ 

\nf@margin Margin for floats

279 \newlength\nf@margin

 $280 \ensuremath{\texttt{Nnf@margin}\{12\p0\}}$ 

\nf@trianglebase The design requres a triangle under the caption. Here it is

 $281 \neq 0$  \newlength\nf@trianglebase

282 \setlength\nf@trianglebase{12\p@}

\chartwidth The resulting width of a chart

283 \newlength\chartwidth

\chartheight The resulting width of a chart

 $284 \neq 284$ 

\nf@topskip Top separation for a nonfloat @topskip

\nf@bottomskip Bottom separation for a nonfloat @bottomskip

\nonfloat@type The counter to keep the next type to assign

285 \newcount\nonfloat@type 286 \nonfloat@type=4\relax

\nf@contentsbox The box to keep the contents of the float

287 \newbox\nf@contentsbox

\nf@mainbox The box for the float

288 \newbox\nf@mainbox

\newnon@float The macro \newnon@float has the following arguments: TYPE, EXT, NAME for example

\newnon@float{map}{lom}{Map}

It defines a nonfloat with these parameters.

289 \def\newnon@float#1#2#3{%

First, we need to define \ftype@TYPE: the type of the float. Note that tables are taken, so we need to make a special care of nonfloats that correspond to floats.

- 290 \expandafter\ifx\csname ftype@#1\endcsname\relax
- 291 \expandafter\edef\csname ftype@#1\endcsname{\the\nonfloat@type}%
- 292 \multiply\nonfloat@type by 2\relax
- 293 \fi

Now we define the extension for the floats

- 294 \expandafter\def\csname ext@#1\endcsname{#2}%
- 295 \xdef\@toc@ext@list{\@toc@ext@list,#2}%

The macro \fnum@TYPE formats the line like "Figure 1". We need to check whether the counter is defined

- 296 \expandafter\ifx\csname the#1\endcsname\relax
- 297 \newcounter{#1}\fi
- 298 \expandafter\def\csname fnum@#1\endcsname{#3~\csname
- 299 the#1\endcsname}%

Now we want to define the environment TYPE. Since it might be already defined, we first delete this definition, otherwise \newenvironment might throw an error

- 300 \expandafter\let\csname #1\endcsname\relax
- 301 \expandafter\let\csname end#1\endcsname\relax

And the actual definition

302 \newenvironment{#1}{\non@float{#1}}{\endnon@float}}

\@getfirstletter

An aux macro to get a first letter of a word. Used in constructs

\edef\U{\@getfirstletter{AAAAA\@endword}}}

```
{\tt 303 \setminus def \setminus @getfirstletter \#1 \{ \setminus @@getfirstletter \#1 \}}
```

- $304 \ensuremath{\mbox{\sc def}\mbox{\sc de$
- 305 \def\@gobbleword#1\@endword{}

\non@float

Now we are ready to define the \non@float macro. It has three parameters: TYPE, SIZE and PLACEMENT. \nf@source is the source of the float.

```
306 \def\non@float#1#2#3{
```

- 307 \def\@captype{#1}%
- $308 \ \def\nf@size{#2}%$
- 309 \def\nf@placement{#3}%

The macro \nf@vert@pos is either u or 1

- 310 \lowercase{\xdef\nf@vert@pos{\@getfirstletter#3\@endword}}

### 3.11 Output Routine

This is hairy because output routines are hairy...

We need several insert boxes. Naming convention: the letter for the box size and two letter code for the location. We use \newbox instead of \newinsert since we do not use associated \count, \dimen and \skip registers.

```
420 \newbox\nfbox@S@ul
421 \newbox\nfbox@S@ur
422 \newbox\nfbox@S@ll
423 \newbox\nfbox@S@lL
424 \newbox\nfbox@S@UL
425 \newbox\nfbox@S@UR
426 \newbox\nfbox@S@LR
427 \newbox\nfbox@S@LR
428 \newbox\nfbox@T@ul
429 \newbox\nfbox@T@ur
430 \newbox\nfbox@T@UL
431 \newbox\nfbox@T@UR
432 \newbox\nfbox@T@UR
433 \newbox\nfbox@W@ul
433 \newbox\nfbox@W@ul
434 \newbox\nfbox@W@UL
```

```
435 \newbox\nfbox@W@LL
                  436 \newbox\nfbox@B@ul
                  437 \newbox\nfbox@B@UL
     \@tempboxb
                 Standard LATEX has \@tempboxa. We need more...
                  438 \ifx\@tempboxb\@undefined
                  439 \newbox\@tempboxb
                  440 \fi
\standard@output
                 The standard LATEX output routine is saved as \standard@output. We use it for
                 one column pages—maybe one even wants a standard float here?
                  441 \edef\standard@output{\the\output}
                 Right now we use standard output on one column pages and the new one with
        \output
                 two columns
                  Here we define our own output routine.
     \nf@output
                  443 \newtoks \nf@output
                  444 \nf@output {%
                     We define the current boxes \curr@nfbox.... Also, uc or lc mean Upper or

476 %
477 \text{ \%} There are several possibilities when we start the output routine for
478 % a single column in a two-column layout.
479 % \begin{enumerate}
480\;\text{\%} \item Wide or big non-floats completely cover the page. In this
481\ \% case we do not need to create columns, and directly go to the
482 % output.
483 \% \item The columnd is occupied by tall or single nonfloats. We make
484 \% a column of nonfloats and send it further.
485 \% \item There is room for text on the page, but its height
486 \% (\cs{@colroom}) is different from the one known to the page builder
487\,\% (\cs{vsize}). In this case we change \cs{vsize} and return.
488 \% \item The room for text is exactly \cs{vsize}. In this case we form
489 % a column and return.
490 % \end{enumerate}

\nf@makecol

This macro tries to make one column of text. If successful, it puts first column into temporary storage, and outputs the page when or if the second column is ready.

When we start \nf@makecol, \@colht already reflects possible wide nonfloats. This to get \@colroom, we need to take into account only the narrow ones

```
539 \def\nf@makecol{%
540
     \global\@colroom\@colht
     \ifdim\ht\curr@nfbox@T@uc>0.5\baselineskip
541
542
        \global\@colroom=0pt
543
544
     \ifdim\ht\curr@nfbox@S@uc>0.5\baselineskip
        \global\advance\@colroom by -0.5\textheight
545
546
547
     \ifdim\ht\curr@nfbox@S@lc>0.5\baselineskip
548
        \global\advance\@colroom by -0.5\textheight
549
     \fi
```

Now there could be two cases. If **\@colroom** is small, we fill the column with the non-floats only. Otherwise we have a "mixed" column with both text and nonfloats.

```
550 \ifdim\@colroom<0.5\baselineskip
551 \nf@makenfcol
552 \else
553 \nf@makemixedcol
554 \fi}</pre>
```

\nf@makenfcol This macro outputs a column with only non-floats. If it is called, we already know

that the narrow non-floats would fill the column, so we do not do any additional checks.

#### 3.13 **Tables**

\tablepages Long tables at the end of a part

```
830 \newenvironment{tablepages}{\onecolumn
                       \bgroup\narrowfamily\multicolsep=\z@
                       \vspace*{-2cm}%
                  832
                       \def\emph{\textsl}%
                  833
                       \begin{adjmulticols}{1}{-1.3cm}\centering\normalcolor}%
                  834
                       {\end{adjmulticols}\egroup}
                 Some styles define \tablemph commands. Here we supply a stub
      \tablemph
                  836 \AtBeginDocument{\providecommand{\tablemph}[1]{\emph{#1}}}
                    We define new column types for table headers:
                  837 \newcolumntype{d}[1]{D{.}{.}{#1}}
                  838 \newcolumntype{H}{>{\columncolor{@tableheadcolor}[1.01\tabcolsep][1.01\tabcolsep]}c}
                    P columntype is much more complex. Basically we want a centered entry with
                 a parbox of the given width inside.:
                  839 \newcolumntype{P}[1]{>{\columncolor{@tableheadcolor}[1.01\tabcolsep][1.01\tabcolsep]}
                         \@fao@Pentry{#1}}c<{\end@fao@Pentry}}</pre>
                 Since \parbox needs "real" braces to delimit the argument, we use this trick. Note
   \@fao@Pentry
                 \hspace{0pt} to allow TeX to hyphenate the first word.
                  841 \def\@fao@Pentry#1#2\end@fao@Pentry{%
                  842 \parbox[t]{#1}{\centering\strut\hspace{\z@}#2\strut}}
                    Same with C entry:
                  843 \newcolumntype{C}[1]{>\columncolor{@tableheadcolor}[1.01\tabcolsep][1.01\tabcolsep]%
                         \@fao@Centry{#1}}c<{\end@fao@Centry}}
   \@fao@Centry
                 This macro is similar to \@fao@Pentry, but with different way to set the width of
                 the \parbox:
                  845 \def\@fao@Centry#1#2\end@fao@Centry{\%
                  846 \ \text{$=99.999}%
                  847 \@tempdima=#1\@tempdima\relax
                  848 \parbox[t]{\@tempdima}{\centering\strut\hspace{\z@}#2\strut}}
\LT@makecaption This macro produces the caption for the long tables. We redefine it to get the
                 tables in the way specified by the designer
                  849 \def\LT@makecaption#1#2#3{%
                       \LT@mcol\LT@cols {@{}1}{\cellcolor{white}%
                  850
                         \rlap{\fcolorbox{white}{@tableheadcolor}{\normalsize}
                  851

                        990 \section{#1}}
                       The color for the little squares in the indicator section
@indicatorsquarecolor
                        991 \define@key{fao}{indicatorsquarecolor}{%
                             \colorlet{@indicatorsquarecolor}[cmyk]{#1}}
                        993 \faoset{indicatorsquarecolor=gray}
                       This starts the metadata section. The commands inside are local to the metadata.
            \metadata
                        994 \def\metadata#1{\bgroup
                                 \def\meta@key{0000}%
                       Now we define the commands for metadata:
                 \key This sets the key:
                               \def\key##1{\NR@gettitle{##1}\phantomsection\label{##1}%
                                 \gdef\meta@key{##1}}
                        997
                       This typesets the source:
                               \def\source##1{\textbar\,\emph{\bfseries Source: }##1. }%
                        998
```

```
This typesets the owner:
                999
                        \def\owner##1{\textbar\,\emph{\bfseries Owner: }##1. }%
                      \begin{list}{}{\tt topsep8p@\labelwidth\z@}
               1000
                          \labelsep\z@\itemindent\z@\parsep0.4ex plus 0.5ex minus
               1001
                          0.2ex\relax\listparindent\z@\leftmargin\z@\rightmargin\z@
               1002
               1003
